

SECURE SOLUTIONS

SECURITY WITH YOUR SAFETY IN MIND

Brought to you by FTL Secure Solutions, a division of Fibre Technologies Ltd

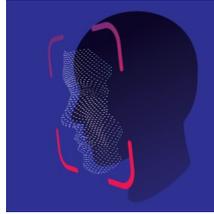

At FTL Secure Solutions, we are now actively assisting our clients to introduce measures to mitigate the risk of exposure to Covid-19. We appreciate that the way business works is changing and that the focus is now on how we make our business premises safer during these challenging times. We have a growing portfolio of products designed to either reduce the risk of exposure to Covid-19 or to provide an early warning that an employee or visitor may be running a fever.

Contactless 'No Touch' Exit Buttons

People Counting Cameras

Facial Recognition Terminals

'Fever Screening' Thermal Solutions

Contactless 'No Touch' to Exit Button

This is simply a device that can be retrofitted to replace your existing push to exit button on your access control / door entry, that doesn't require you to physically touch the button to activate the release on the door. In high-footfall areas, potentially hundreds of people per day can interact with push to exit buttons. This represents a simple, effective solution to reduce your exposure risk.

People Counting Camera

These cameras will actively report, in real time, on the number of people in your premises at any one time. This is simple way to manage social distancing in your premises. Comes as either a standalone system or, in most instances, can be bolted on to your existing CCTV system.

Facial Recognition Terminals

True contact-free access control where the staff members face is their entrance credential. When combined with a contactless push to exit button and either an anti-bacterial push plate or door automation, this solution can remove in its entirety any interaction with the door.

'Fever Screening' Thermal Solutions

We offer a range of fixed and handheld specialist thermal camera solutions that have been designed to assist organisations with larger scale screening. This ranges from handheld scanners, fixed bullet cameras and walk-through detectors, accurate to 0.3 degrees. This solution comes as a standalone system or in many instances it can be added to your existing CCTV infrastructure.

If you are looking for assistance with your business continuity plans, or if you would like some advice on risk reduction at your business premises, please feel free to
